GROWING BULBS IN WATER AND PEBBLES

Is another very fascinating method. Here, too, fancy bowls, glass or china dishes can be used. Fill the receptacles to very nearly the top with pebbles, then fill with water until it is on a level with them, press the bulbs gently into the pebbles so they stand erect; the roots will wind their way through them and secure a firm hold for the bulbs. Water must be added as it is taken up by the roots for nourishment. The following bulbs are adapted to this method:

GROWING HYACINTHS IN GLASSES

Hyacinths. The single-flowering varieties can also be grown in water for which especially constructed glasses, known as "Hyacinth Glasses" (see illustration) should be used.

Culture.—Single Hyacinths do better than Double in glasses, as they produce a much larger and more showy truss. Place the bulbs in the glasses, which should be filled with water so it touches the bottom of the bulbs; put them in a closed box in a cool place, or on a shelf in the dark part of the cellar, for from six to eight weeks, changing the water every ten days or two weeks; then remove them to the light. If then placed in a cool room they will produce very fine spikes and remain in bloom a long time. A small piece of charcoal in the water is beneficial.

Cultural Directions, "Bubs for House Culture" free with every order, if asked for.

RESTRICTION OF BULB IMPORTS

The U. S. Federal Horticultural Board has seen fit to instigate the passing of what is known as the Plant Exclusion Quarantine No. 37. This act went into effect June 1, 1919, and in addition to barring all plants excludes all flower bulbs with the exception of the following: Tulips, Narcissus, Hyacinths, Crocus, Lily Bulbs and Lily of the Valley.

We believe the application of Quarantine 37 as applied to bulbs which have never been found guilty of bringing any detrimental pests to these shores, to be unwarranted, undesirable, unjust and unnecessary, and it is hoped that when the flower loving public has been awakened as to the severity and drastic extent of this act Congress will be prevailed upon to rescind the measure.

Bulbs for Early Forcing French Roman Hyacinths

(Ready for delivery in August)

Roman Hyacinths are extensively used for forcing. The flowers, while smaller than those of the Dutch Hyacinths, are produced in greater abundance and are delightfully fragrant.

Mixed Darwin Tulips

W. & D.'s Select List of Choicest Darwin Tulips

The Most Exquisite Race of all May-Flowering Tulips

A strong growing race of Tulips, with large, perfect, cup-shaped, brilliantly colored flowers, carried erect on long, stiff stems, averaging 2 feet in height. Wonderfully showy in beds or in clumps in the herbaceous border or among shrubs.

Grown for cut flowers they will prove very valuable at a time when the gardens yield so little to decorate our rooms. **They flower during the middle part of May, when the Spring flowers are over and the Summer flowers, such as Peonies and Roses, have not yet come in.** Their chief characteristics are the perfect cup-shape of the flowers and the blue, black or white coloring at the base of the petals inside of the flowers.

An asterisk (*) indicates varieties especially suited for forcing.

Chrysolora

Single Early Tulips

Few, if any, of the Spring-blooming flowers rival the Tulip for brilliancy of bloom or ease of culture. For formal beds on the lawn or garden borders they are excellent subjects. They do not possess the same size of bloom and length of stem of the May-flowering Darwin, Breeder and Cottage varieties, but where early blooms are desired they are frequently used. Many of the varieties may be forced in bloom in January, while all the varieties may be easily had in flower in pots late in February or early March.

Varieties marked (1) generally begin to flower the 20th of April. Those marked (2) after the 1st of May.

Late May-Flowering Hardy Cottage Garden Tulips

These beautiful Tulips have mostly been found growing in old cottage gardens in England, Scotland and Ireland, where they have been in some cases for over fifty years. They present a great variety in form and coloring, and have none of the stiffness of other Tulips. On account of their extreme hardiness they are specially adapted for permanent hardy flower borders, where they should be freely planted in large clumps and masses. They grow from 2 to 3 feet high.

Breeder Tulips

Breeder Tulips

Breeders are the unbroken forms of the old Florist Tulips. Most of the varieties are purple, maroon or terra cotta colored. They are of enormous size, even larger than the Darwins, and vigorous growth. These Tulips are very valuable for the garden, producing, by their refined colors, a most artistic effect.

Single Daffodils

Single Narcissus, or Daffodils

ALL LARGEST SIZE BULBS

Narcissus are among the most popular and largely grown of Spring-flowering bulbs, and deservedly, too. Their exquisite grace, beauty and charm of habit have been immortalized in the poetry of all times. No garden should be without them.

They are all of the easiest cultivation, thriving in almost any soil and situation, and they may be left alone for several years after once being planted. They do best, however, in a deep and somewhat stiff soil, and in a partially shaded position. They are well adapted for planting by the sides of streams, lakes or ponds, and in mixed flower or shrubbery borders. They are also suitable for naturalizing in the grass, by the side of woodland walks, or in open spaces between trees and shrubs.

Double Daffodils in Pots

Double Narcissus, or Daffodils

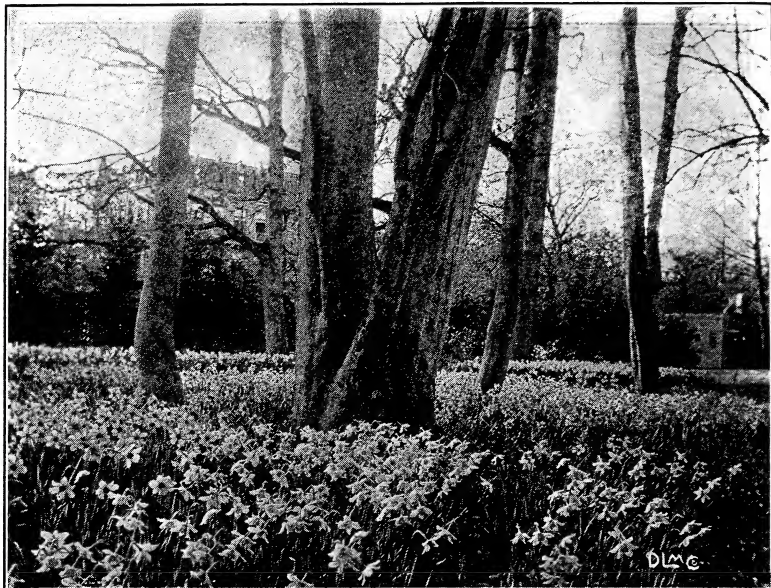

Double Narcissi, or Daffodils, as they are generally called, are one of the favorites of Spring-flowering bulbs. They are perfectly hardy, of easy culture, and can be forced very readily. Their beautiful and graceful appearance and habit are very much admired.

Double Van Sion, Yellow (Double Nose). Large golden yellow; undoubtedly the most popular variety grown. The bulbs are double nosed, and will produce two or three flowers; it is one of the earliest for forcing. Doz. \$1.00, 100 \$7.00, 1000 \$65.00.

Double Van Sion (Single Nose). Extra Size Bulbs. The double yellow Daffodil; one of the best for forcing. Doz. 60c., 100 \$4.25, 1000 \$40.00.

Our Double Van Sion Narcissi are the true golden yellow and are grown especially for us in the best soil which can be found in Holland. We can recommend them as the best ever sold.

	Doz.	100	1000
Alba Plena Odorata. Pure white, sweet scented Gardenia like flower.....	\$0.60	\$4.50	\$40.00

Sulphur Phoenix. (Codlings and Cream). Large double white with sulphur center.....	.60	4.50	40.00

Mixed Narcissus for Naturalizing

We offer these at exceptionally low prices to encourage liberal plantings. They are very suitable for growing in masses for garden decoration, and are grand for cutting, and are particularly adapted for mixed borders, "naturalizing" in shrubbery by woodland walks, in woods by streams and lakes and semi-wild, outlying grounds. They are perfectly hardy and will flourish and increase.

Miniature Hyacinths—Excellent for Pot Culture

Miniature or Dutch Roman Hyacinths

These Hyacinths are three year old bulbs, and are especially recommended for forcing in pans for Winter-flowering.

The spikes are slender, and when planted seven or eight bulbs to an 8-inch Bulb Pan or five bulbs to a 5-inch Pan, they make a beautiful show. We do not recommend them for outdoor blooming.

Second Size Named Hyacinths FOR FORCING OR BEDDING

This grade of named Hyacinths is the best value offered in Hyacinths. Being of the same age as first size bulbs from which they are the second selection, many varieties will produce spikes nearly as large as the former, so that they are splendid for growing in pans or three in a pot. They will produce much better effects when grown in borders than unnamed Hyacinths, not only that the quality is so much better, but a single variety used for a certain shade of color is far more pleasing than a mixture, while the price difference is only slight.

W. & D.'s Selected Hyacinths FOR BEDDING AND POT CULTURE

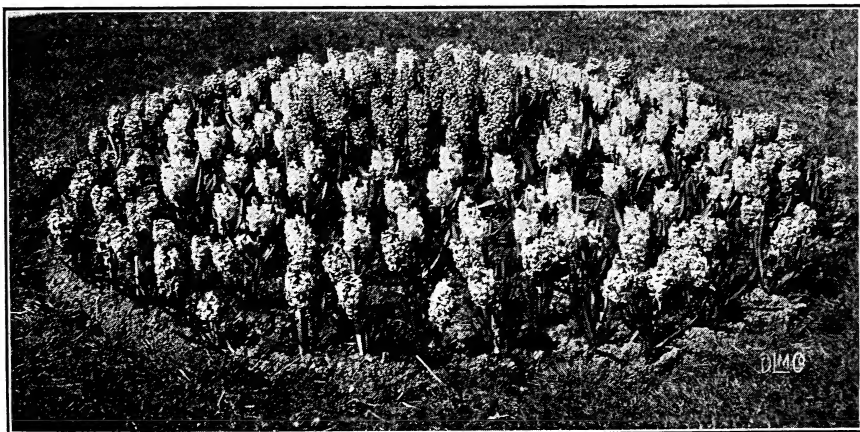

These are grown for our trade and must not be confounded with the so-called Mixed Hyacinths sold by some, containing the cullings of the trade, immature, undersized bulbs. For massing in borders or design work, or for forcing, they are well adapted. Our mixture is composed of bulbs which are nearly of the same height and flower simultaneously.

Lily of the Valley Clumps

(Ready about 1st of November)

Are generally used for outdoor planting and should be placed in a shaded locality, where they can be left permanently. They are the most popular of Spring-flowering plants, and are greatly admired on account of their graceful appearance and delicate, bell-shaped, pure white flowers; highly prized for cutting in the early Spring. They are the most charming when grown in large patches in partially shaded localities around the lawn, near the borders of streams, lakes, etc., being perfectly hardy.

-----------------------------------	------------

Alfalfa

Very valuable, not only as a forage crop, but as a soil enricher. If sown broadcast, sow 30 to 40 lbs. per acre; if drilled in, sow 25 to 30 lbs. per acre. Lb. 45c., 100 lbs. \$40.00.

Crimson Clover

Excellent for a cover crop in orchard, or for plowing under to improve poor soils. Sow at the rate of 20 lbs. per acre. Lb. 45c., 100 lbs. \$40.00.

Hungarian Millet

The quickest catch crop for hay, may be sown any time through the Summer up to the middle of August. Sow one bushel per acre. Lb. 15c., 100 lbs. \$12.00.

Winter Vetch (Vicia Villosa)

Also called Sand or Hairy Vetch. Produces good crops on poor sandy soils, though it is much more vigorous on good land. It is perfectly hardy, remaining green all Winter, and should be sown during August and September, mixed with rye, which serves as a support for the plants. Seed should be sown broadcast at the rate of one and one-half bushels to the acre, or one bushel with one-half bushel of rye. Lb. 32c., 100 lbs. \$30.00.

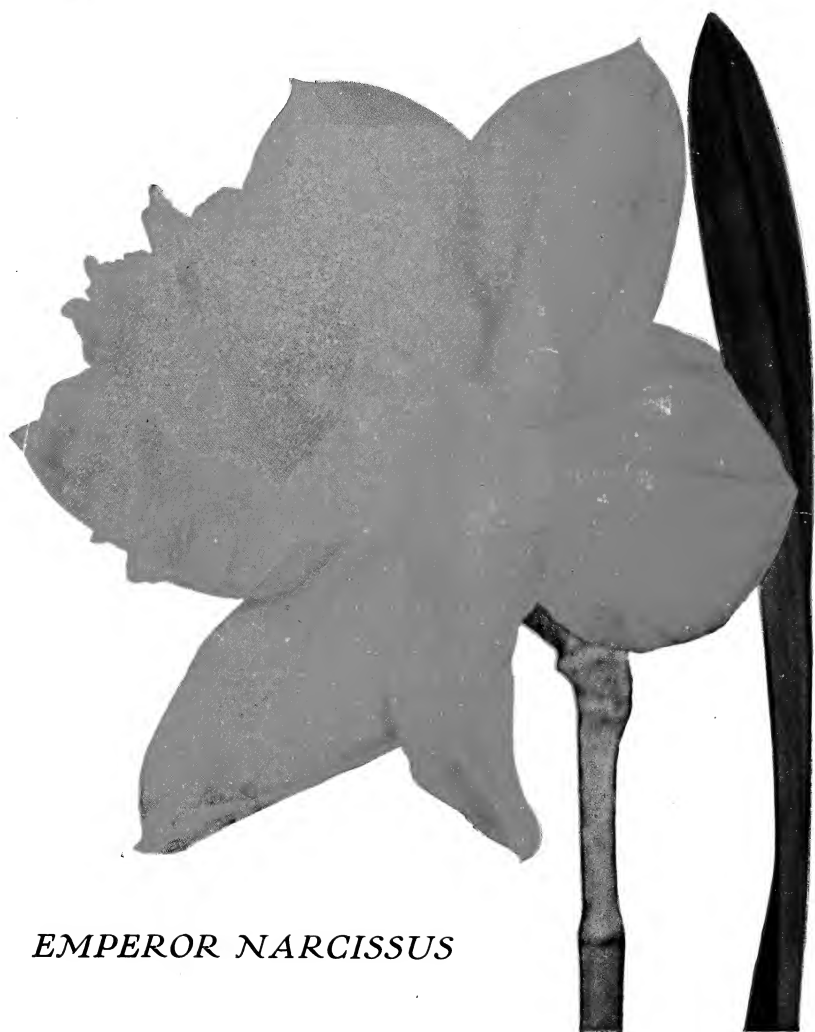

Dwarf Essex Rape

Largely grown as a fattening food for sheep in the Autumn. It is also especially desirable for pasturing hogs during the Summer months. In the Northern States seed may be sown at any time, from early Spring until the end of August. Sow ten to twelve pounds to the acre broadcast, or four to five pounds to the acre in drills 15 inches apart. Lb. 25c., 100 lbs. \$20.00.
